

SMM-1 Snow Melt Marker

SMM-1 a bronze pavement-mounted marker that is used to identify pavement that has electric heat trace embedded within it.

Will not corrode in concrete like aluminum markers.

Inverted "Y" design stem is flared to approximately 3/4" for anchoring in concrete.

Installation Instructions:

1. After slab has been poured, allow to set for 5-10 minutes and then insert SMM-1 marker into proper position.
2. Clean area around top surface of marker.
